

How to apply Nature's Defenders Line of Products

MEAN Green Insect Spray

This product is *Ready to Use*, and can be used for the following applications:

As personal repellent –

Apply thoroughly on exposed skin area every few hours

For Head Lice- Spray head until wet, cover with shower cap for 30 min., comb out with nit comb and wash hair.

For Infestations Indoors-

This product is best used through a non-thermal Fogger as part of an agenda that includes ECO Green and diatomaceous earth when dealing with Flea, Tick, Roach and Bed Bug infestations.

****Consultation available**

As a Pet Flea/Tick Spray-

Mean Green is a quick kill spray for the pests that feast on your pet(s). Just lightly spray where animal is scratching and flea/tick should try to leave the area. Spray again to kill fast.

***Please test on pet before using liberally & avoid having animal ingest product as it might make their stomach very upset**

Mean Green can also be used to disinfect Air Ducts in homes and businesses through the fogger.

ECO Green Concentrate

This product can be used in the following applications:

For Indoor Spraying- Mix 4-5 ounces per gallon of water to use in pump sprayer. Use monthly as your indoor spray treatment to **safeguard your family's health.**

For Outdoor Spraying:

Hose End Sprayer- Fill bottom ½ with water, add 8 to 12 ounces and fill with water. Attach bottom to sprayer and use on 1 ½ oz. setting (if dial top) and use for 1000-5000 sq.ft. depending on insect issue.

In Tank Sprayer (up to 200g)

Mix a minimum of 32oz. per 100 gallons for maintenance & up to 64oz. for heavy insect pressure.

Fertigation systems (LSS)

Depending on the size of system, # of zones, times and frequency of watering.....it can be as little as 32oz. per month to keep your family safe from the standard toxic chemicals... Also great for Garden drip systems for nematodes

Ornamentals & Vegetables-

Mix 2-3 ounces per gallon and spray on foliage. DO NOT SPRAY during heat of the day

Vet's Choice Concentrate

This product can be used in the following applications:

For Mange- use straight on a cotton ball and dap lightly on affected area once or twice per day until it begins to heal, then maybe once per week until healed.

For Dipping stations- Mix a minimum of 8 ounces per 40-50 gallons water. Use stronger dilutions for many multiple dips.

For Misting Systems- Mix a minimum of 10oz. per 55 gallons of water. Use stronger dilution rates for longer relief from insects. Spray every 10-15 min. for approx. 20 seconds.

RidAWeed Spray

Spray as you would use Roundup for weed control without toxic chemicals.

DO NOT Spray if rain is expected within 48 hrs.

Great for paver areas, driveways etc, but will discolor some grasses if used in lawn but will recover. **Caution around shallow rooted plants.**

Thanks for choosing Nature's Own Solutions to help Safeguard your Family's Health
